EAS FOR COLLEGES !!

Campus Televideo connects cable TV to college EAS platforms

The goal is to provide emergency information to students and faculty across the entire campus as quickly as possible.

Aug. 27, 2012 Michael Grotticelli

At the Association of Public-Safety Communications Officials Conference in Minneapolis, Minn. last week, <u>Campus Televideo</u>, a provider of custom cable TV, ResNet data and other telecommunications services to over 230 colleges and universities nationwide, announced its has launched the country's first EAS http://www.campustelevideo.com/solutions/eas (Emergency Alert

System) integration service for colleges and universities connecting cable TV to existing EAS platforms.

The goal is to provide emergency information to students and faculty across the entire campus as quickly as possible. Jon Stewart, Campus Televideo,s senior director of business operations, said the technology allows them to relay a consistent message across multiple device types on campus.

Working with <u>Monroe Electronics</u> and <u>e2Campus</u>, Campus Televideo said it successfully beta tested and launched this new service at <u>Misericordia University</u> in Dallas, PA. Using Monroes' One-Net— an analog and digital EAS encoder/decoder that is fully compatible with the new FCC and FEMA Common Alerting Protocol [CAP] mandates—and e2Campus' specialized emergency alert distribution software Campus Televideo is able to tie separate EAS platforms together, creating one, single point of message delivery

The e2Campus service is owned by Omnilert, a Washington, D.C.-based company that develops and markets unified mass notification systems for sending time-sensitive information to large groups of people. With e2Campus, a single person can communicate important information to thousands of people anywhere, anytime, on any device.

This new integrated solution will allow safety administrators to enter a single message and deliver it consistently across multiple EAS platforms to multiple devices (television, cell phones, emails). Previously, safety administrators had to manage separate login and messaging processes for each platform, introducing complexity and slowing delivery.

"This kind of innovative approach to serving our university needs is why we've been with Campus Televideo for nearly fifteen years and e2Campus for five years." said Mark Reboli. Misericordia University. "Although you never hope to have a need to reach your campus in an emergency situation, this integrated system adds an important piece to the University's emergency notification plan with a valuable, direct, and simple way to reach our students throughout the campus without safety personnel performing additional work."

UNFINISHED BUSINESS: NONE

NEW BUSINESS OR ANY ITEMS FOR THE CHAPTER INTERES: MEMBERS REQUESTED INVESTIGATION OF WHAT PHONE NUMBER TO CALL FOR F.A.A. WHEN TOWER AND MARKERS LIGHTS ARE OUT.

NEXT MEETING DATE AND LOCATION: TUESDAY SEPTEMBER 11, 2012 CLEAR CHANNEL RADIO @ 6 PM

MEETING ADJOURNED: AT 13:04 PM

A NOTE FROM THE EDITOR:

A couple of definitions from AVOCENT are included in page 5.

Don't miss this month meeting, it looks great !!

For this month we are going to have a very interesting and educative presentation. Who does not have a KVM in operation at your office or studio?. Well, this is the opportunity to see "live" the AVOCENT Digital KVM over IP and other products as well.

TOM VEITE from Emerson
Will be showing them at our
regular monthly meeting next
Tuesday Sept. 11 at the Clear
Channel Studio @ 6 PM.

He will order food and drinks, so there is no reason to miss this September meeting. For the headcount, please RSVP to:

Tom.Veite@Emerson.com and copy me!! Thank you!

SEE YOU THERE !!

Avocent® Analog KVM Extension (AMX)

The Avocent® AMXTM Analog High Performance Matrix KVM solution is designed for organizations that need to provide workers the ability to quickly and seamlessly access and share one or more computing resource (s) which are physically separated from their work environment. AMX uses direct connect technology to provide fast switching between resources

Digital KVM Extension (HMX)

The HMXTM Digital High Performance Matrix KVM solution is designed for organizations that need to provide workers the ability to seamlessly access and share one or more computing resource(s) which are physically separated from their work environment. HMX leverages industry standard IP technology and existing network infrastructure to provide sharing and switching between resources separated by large distances.
